

2-in-1 Gasket Scraper

This compact gasket scraper features a lightweight aluminium handle with ergonomic grip and 2 interchangeable blades. The brass blade is softer than aluminium, which makes it ideal for use when removing paper gaskets from aluminium engine cases without damaging the surface, with the steel blade suitable for the removal of more stubborn or hard to remove gaskets. The short length of each of the slant cut blades allows for greater precision when removing the gasket material, reducing the chance of slipping and causing damage to the user or the surrounding components.

Additional Information

- Features an anodised aluminium handle with ergonomic grip.
- Blade width: 14mm, Length: 143mm.
- Supplied with a brass blade for use on aluminium engine casings and a steel blade for use on difficult to remove paper gaskets.
- Storage space for one spare blade in the handle.
- Pack of spare blades available (includes one brass and one steel blade), see Laser Part No. 8380.
