

Soldering Iron Station, Hot Blower & Torch Kit

A combined butane gas powered soldering iron, hot air blower and gas torch with piezo electric ignition. It features a quick release mechanism on the body, so the heads can be easily switched, with the soldering head having 6 different screw-in tips. It also features a safety lock, to prevent accidental ignition, together with a flame lock to allow for continuous use, together with a viewing window to check the gas level. It comes supplied in a plastic case, which acts as mini work station, not only holding the attachments and accessories but also allowing it to be used as a safety stand that encloses the tip allowing for it to safely heat up and cool down. Suitable for use in the workshop and around the home and is ideal for automotive technicians, electricians, jewellers, modellers, hobbyists & DIY.

Additional Information
